#### **DETAILED ACTION**

- 1. This action is responsive to communications: Amendment A filed 10/20/03.
- 2. Claims 1-8, 10-17, 19, 20, 22, 25, 26, 31, 32 are pending in the case. Claims 1 and 10 are independent claims.
- 3. The rejection of claims 1-8, 10-17, 19, 20, 22, 25, 26, 31, 32 under 35 U.S.C. 103 (a) as being unpatentable over Gase has been withdrawn pursuant to the Applicant's amendment. Claims 9, 18, 21, 23, 24, 27-30 have been cancelled and claims 31 and 32 have been added in accordance with Amendment A.

### Claim Rejections - 35 USC § 103

- 4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 5. Claims 1-7, 10-14, 16, 19, 20, 22, 25, 26, 31, and 32 are rejected under 35 U.S.C. 103(a) as being unpatentable over Venkatraman et al., USPN 5,956,487 filed (10/25/96). In reference to independent claim 1, Venkatraman teaches:

A web server that dynamically generates a web page to reflect the updated state of the information pertaining to the device. The web server functionality is embedded into the printer device by providing software (compare to "providing a web page from a printer's embedded web server to the web browser"). See column 3, lines 33-37 and column 4, lines 23-28.

Art Unit: 2178

The web browser includes a selection device that enables a user to select objects and URL links rendered on the display (compare to "receiving a URL entered into the provided web page by the web browser"). The reference demonstrates a method of receiving a URL defined in the HTML file through the employment of the web browser, which is used to direct the users requests towards other web pages for various printer support functions. See column 7, lines 1-21.

The reference further teaches URL's that are associated with hyperlinks. The hyperlinks provide direct access to the Internet and make available a large organization network from which a user would be able to search the World Wide Web and locate information regarding related printer support functions.

The reference discloses a device with embedded web access functionality that provides device-specific user interface functions. The device includes a network interface and a web server along with a monitor. The device represents a wide variety of devices including devices such as *printers*, fax machines, etc. It would have been obvious to one of ordinary skill in the art at the time the invention was made to have modified the embedded web access mechanism in a printer as taught by Venkatraman and printed information gathered via hyperlinks, because it would have given the user the added benefit of enhanced and widely accessible user interface functions that were employed in printer environments.

### In reference to dependent claim 2, Venkatraman teaches:

The processor formats the information into the HTML format that defines the web page and transfers the HTML formatted information to the web browser via the home-based network. See column 6, lines 17-22.

Application/Control Number: 09/465,835 Page 4

Art Unit: 2178

In reference to dependent claim 3, Venkatraman teaches:

The reference demonstrates the utilization of HTML formatting language within the embedded web access mechanism. See column 6, lines 17-22. The reference does not explicitly teach a web page formatted in the XML format; however, the reference mentions the employment of HTTP for communication in a client/server environment. It would have been obvious to one of ordinary skill in the art at the time the invention was made, to modify the HTML formatting techniques of Venkatraman and provided various formatting languages for use within a network environment, because it would have given the user the added benefit of having structured data passed within a client/server method.

In reference to dependent claim 4 & 5, Venkatraman teaches:

Hyperlinks defined in the HTML file direct the web browser to other web pages for various printer support functions. See column 7, lines 5-10. The reference discloses a device with embedded web access functionality that provides device-specific user interface functions. The device includes a network interface and a web server along with a monitor. The device represents a wide variety of devices including: *printers*, fax machines, appliances, etc. It would have been obvious to one of ordinary skill in the art at the time the invention was made to have modified the embedded web access mechanism in a printer as taught by Venkatraman and printed information gathered via hyperlinks, because it would have given the user the added benefit of enhanced and widely accessible user interface functions that were employed in printer environments.

In reference to dependent claim 6, Venkatraman teaches:

Application/Control Number: 09/465,835

Art Unit: 2178

The web page may also contain one or more URLs that specify additional web pages located elsewhere, external to the device. The reference further discloses hyperlinks defined in the HTML file. The device methods taught by Venkatraman demonstrate a link to a document that represents printer support functions. See column 6, lines 1-30.

## In reference to dependent claim 7, Venkatraman teaches:

The large organization network may be referred to as an Intranet and may be implement with a variety of communication mechanisms including local area networks connected together by various types of communication links. See column 7, lines 23-29.

In reference to claims 10-14, 16, 19, 20, 22, 25, 26, 31, and 32, the claims recite similar limitations to those of claims 1-7, and therefore are rejected under similar rationale.

#### Allowable Subject Matter

6. Claims 8, 15, and 17 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

#### Response to Arguments

7. Applicant's arguments with respect to claims 1-8, 10-17, 19, 20, 22, 25, 26, 31, 32 have been considered but are most in view of the new ground(s) of rejection.

It is respectfully noted, that applicant's incorporation of the newly formed limitations within the recited claims changes the scope of the claims limitations when interpreted as a whole. Therefore, the instant rejections have been adjusted accordingly.

Application/Control Number: 09/465,835

Art Unit: 2178

Page 6

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Matthew J. Ludwig whose telephone number is 703-305-8043. The examiner can normally be reached on 8:00am-5:00pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Heather Herndon can be reached on 703-308-5186. The fax phone number for the organization where this application or proceeding is assigned is 703-746-7239.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703-305-4700.
